CPSC 231 (Winter 2017)

TA: Samiul Azam

Problem statement 1

- Write a program that takes the name of an input text file on the command line, then converts the text in the input file into "ransom" text by randomly altering case, writing the output to the screen.

- Start with the test program in the attached filetest.py.

- Use the input.txt file as program input.

Thank you
